🐙 Claudiu Furtea

SKILLS

BACK END DEVELOPMENT
Java, C++, Apex

FRONT END DEVELOPMENT
HTML, CSS, JavaScript, Bootstrap, React.js, Lightning Web Components

MISCELLANEOUS
Spring Boot, Node.js, Express.js, Next.js, Spring, MongoDB, MySQL, Git, PostgreSQL, AWS, Salesforce, AI

LANGUAGES

ROMANIAN - Native
ENGLISH - Upper-Intermediate
GERMAN - Elementary

COURSEWORK

JavaScript Algorithms and Data Structures - freeCodeCamp
Object-Oriented Programming
AWS Essential Training for Developers
Spring Boot for Beginners

AWARDS

Salesforce Certified AI Associate - SALESFORCE
Nov 2024

Certificate of Completion - DIGITAL NATION JavaScript Certification
Jan 2024 | Brasov

EXPERIENCE

VASS - Internship
Salesforce Full Stack Developer | May 2024 - Present, Hybrid

- As a Salesforce Full Stack Developer Intern I managed to learn the base of the Salesforce platform by creating custom web components with JavaScript, HTML and CSS, and relate those components with the backend built in Apex
- Also did developer related tasks, such as creating an integration with DeepL API translator, creating a SSO identity provider with Azure
- As a Salesforce Certified AI Associate I have learned the basiscs of AI and how to create an ethical and qualitative model
- Used Apex for HTTP requests and SOQL for querries
- This experience has helped me improve my speaking, explaining and understanding skills, as well as my teamwork skills

TRANSILVANIA UNIVERSITY OF BRASOV
Student | Oct 2022 - Present, Brasov

Fullstack App with Spring and React - Online Store (link)

- The Fullstack App features an online second-hand store, where users can create and update an account, can post products that they want to sell, by uploading details such as photos, description, category, title and the location where the seller is. The app also features a favourites page.
- It provides a secure autentication usign a JWT token that is generated after an encryption algortihm.
- Tech Stack: Spring Boot, React, PostgreSQL, Axios, Java

Machine with One Adress in Python - link

- This project attempts to simulate as closely as possible the operation of a logic processor. It performs mathematical operations such as addition, subtraction, square root.

DIGITAL NATION - Apprenticeship
Javascript Explorer | Sep 2023 - Jan 2024, Remote

City Explorer App - (link)

- The app is created for users who want to search a city by name, and then they can create a list of favourite cities for visiting later by pressing the 'Add to Favourites' button
- A city page offers live information about the searched city, such as weather, population, sunset and sunrise and many other by fetching data from Geocoding and Weather API's.
- Tech Stack: Javascript,Node.js, Next.js ,React with hooks, ChakraUI, MongoDB, NPM

Sport Products Store (link)
- This is a Fullstack project that leverages Node.js to create a robust server, and the user can create markdown posts, incorporating MongoDB to manage three distinct collections - post, article, and category.
- Notably, the category collection establishes a one-to-many relationship with the article object.
- The project contains a section with all categories, a section with last 3 posts, button for creating, deleting and editing all objects

EDUCATION

TRANSILVANIA UNIVERSITY OF BRASOV(UNITBV)
Applied Informatics in German
Oct 2022 - Present | Brasov

COLLEGE OF NATURAL SCIENCES "EMIL RACOVITA"
Natural Sciences
Oct 2018 - June 2022 | Brasov
